CONFORTO ductless does it all!

Introducing the **Maximum Heat Pump Series**
Ductless Mini Split Systems

Adding precisely controlled, energy efficient heating and cooling just became infinitely more flexible!

Conforto's new **Maximum Heat Pump Series** ductless systems provide a highly flexible and efficient method of delivering year-round heating and cooling for maximum comfort.

The ductless split system's indoor/outdoor design makes them an ideal fit for residential and commercial spaces where a ducted solution is not practical. Single and multi-zone systems are available to meet a wide range of year-round heating and cooling needs.

High Wall Air Handler

Condensing Unit (Exterior)

Ceiling Cassette Air Handler

Maximum Heat Pump Series at a glance

- Ductless systems use our sleek wall or ceiling mounted indoor air handlers, with a single or multi-zone outdoor condenser to deliver precise temperature control of one or more rooms.
- Advanced heat pump variable speed technology provides year-round cooling and heating solutions in extreme weather conditions.
- Maximum energy efficiency ratings qualify for utility rebates. ENERGY STAR® Certified.
- Auto Restart - if system shuts down due to power failure, system will restart with previous function settings when power is restored.
- Limited Warranty:
10 years compressor, 5 years parts.

Benefits of Conforto's Maximum Heat Pump Series single-zone and multi-zone ductless systems

With Conforto's **Maximum Heat Pump Series**, consistent temperature control has never been so easy, quiet, energy-efficient, or flexible!

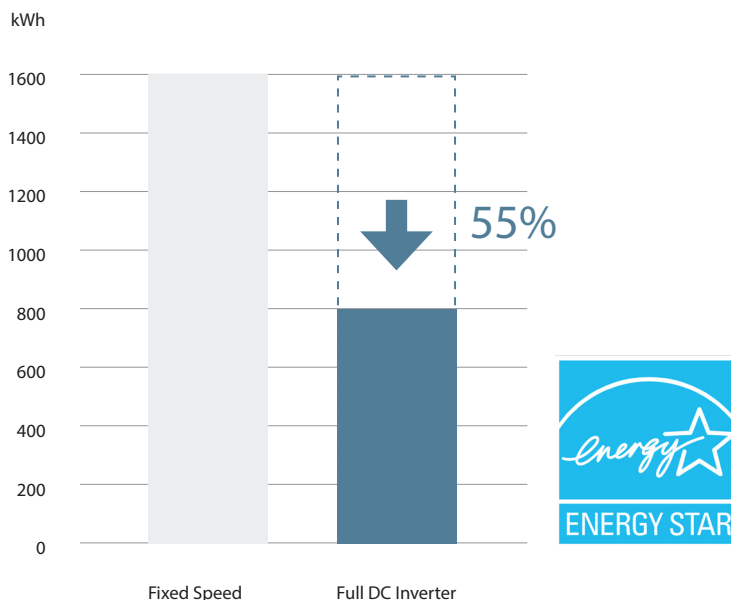

An easy fit for tough spaces

Whether you need climate control for a single room, multiple rooms, or an entire home – the Maximum Heat Pump Series has a ductless solution to meet your needs. Our mini split system connects one or more sleek and space-saving indoor air-handling

units to a single or multiple outdoor units without bulky ductwork. This makes the series a great fit in a wide range of applications, especially retrofits, multi-unit housing, and even historic structures.

Energy efficiency, zero emissions, and rebates!

Our Maximum Heat Pump Series features a high-efficiency twin-rotor, variable-speed compressor (which is more efficient than traditional fixed-speed units) and boasts an ENERGY STAR® certification. This will help you qualify for utility or municipal rebates and reduce your environmental footprint. But that's not all:

- Turbo Mode – rapid and efficient heating of a particular room or space.
- Advanced, Full DC inverter technology – reduces energy use by 55% compared to fixed-speed air conditioners.

- One multi-zone outdoor unit can service multiple indoor units, providing a zoned solution which further reduces energy consumption.

Reliable, quiet operation

The Maximum Heat Pump Series not only runs efficiently, it runs without worries. All-weather resilience is aided by a heated base pan that prevents ice buildup – while a stainless-steel crankcase heater keeps compressor oil warm at all times. The system's advanced compressor design reduces vibration and, thus, strain on components. And when ambient temperature is lower at night, the system automatically adjusts the compressor's audible output to as low as 43.9 dB (for comparison, a human conversation measures approximately 60dB!)

A choice of air-handling units to match any décor or space

Whether your goal is clean aesthetics, space-savings, or both – our ductless solution offers you a choice of air-handling units.

Ceiling Cassette

An excellent option when four-way directional air flow is desired, this unit recesses into the ceiling and can be placed in the center of the room for 360° comfort.

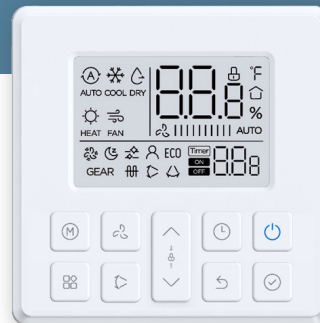

High wall

Perfect for a variety of rooms and can easily be mounted on a wall surface.

Convenient control

Room consistently too hot or too cold? Experiencing hot or cool spots? The Maximum Heat Pump Series systems deliver precise, consistent temperature control for optimum comfort.

- Choice of modes – Choose between Sleep Mode for maximum comfort while sleeping, Timed modes for variety, or Turbo Mode to quickly cool or heat a space.
- Choice of controls – Convenience is yours, whether you opt for the included wireless remote, utilize the “Follow Me” feature or the optional wired wall control.
- Unique “Follow Me” feature - Detects room temperature from the remote control and adjusts for your personal comfort wherever you are in the room.

Wired Wall Thermostat

Included Handheld IR Remote

Zero emissions

The Maximum Heat Pump Series is ECO friendly and a great alternative to carbon-based heating solutions.

“Golden Fin” anti-corrosive coating on the heat exchanger prevents bacteria from breeding in the system and withstands corrosive elements for longer lasting performance.

In addition to the personal comfort provided by the Maximum Heat Pump Series, you can take comfort in the system’s air filtering, leak-detection, and operating features that simultaneously improve indoor air quality and mitigate the system’s impact on the outdoor environment.

Easy Installation, Minimal Maintenance.

The Maximum Heat Pump Series system is easily installed and configured by a qualified contractor. Once installed, maintenance is kept to a minimum. Simply clean the easy-access filter in the system’s air-handling units (no more dusty ductwork!) and schedule an occasional diagnostics and maintenance of your outside condenser unit with your contractor. Internal diagnostics and refrigerant leakage detection quickly identifies any issues and reduces service time.

What is a ductless HVAC system?

Ductless or “mini-split” systems provide heating and cooling comfort to one or more living spaces (or “zones”) without the use of traditional, oftentimes bulky and unsightly ductwork. Instead, a single exterior heating/cooling condensing unit (A) – enables the system to achieve the desired room temperature via a closed, refrigerant loop to one or more strategically located interior air-handling units (B).

Compact, sleek, and designed to quietly and efficiently circulate air for optimum comfort; indoor units constantly monitor air temperature and self-adjust system performance for optimal energy efficiency.

Also perfect for light commercial spaces such as:
data centers/server rooms, meeting/conference rooms, gyms, and more...

| | | | 9 k + 9 k + 12 k + 12 k + 18 k | |
| | | | 9 k + 12 k + 12 k + 12 k + 12 k | |
| | | | 12 k + 12 k + 12 k + 12 k + 12 k | |

Note: If total indoor units load exceeds nominal capacity of outdoor unit, the practical output capacity of every indoor unit will be correspondingly attenuated. This situation is very evident during heating mode.

ECR international

At ECR International and Granby Industries, we are in the business of keeping you comfortable. Our partnership has made us the leading North American manufacturer of residential and light commercial heating and cooling equipment. Our commitment to research, development and product quality ensure that our customers receive cost effective, efficient products that meet current regulatory and environmental standards.
